RE: Quantity Limit Program Update	DATE: 09/26/08

PHARMACY PROVIDER NOTICE:

This notification is for all New Hampshire Medicaid Pharmacy Providers.

On Thursday, October 23, 2008, New Hampshire Medicaid will be updating the current Quantity Limit program with the following changes:

- All **Proton Pump Inhibitor** medications, **Spiriva**, **Tamiflu** and **Relenza** will be added

Existing classes will have the following additions/changes:

- **Kytril solution, Sporanox, Imitrex stat doses, Treximet, Zomig ZMT 5mg, Avonex, Betaseron, Omnaris and Veramyst**

When clinically appropriate, New Hampshire Medicaid encourages pharmacy providers to contact prescribers regarding those prescriptions where changes may be appropriate to conform to daily dosing limitations. For those patients who require unique dosing regimens, pharmacy providers, prescribers or the prescriber's designated office personnel can contact the First Health Services Call Center at (866)-664-4511 (toll-free).

The Quantity Limit program will continue to be updated periodically with additional medications. Providers may find it beneficial to refer to the Web site for the most current information at <http://newhampshire.fhsc.com>.
